## AquaSorb™ 1000

## Activated carbon for drinking water treatment

AquaSorb ${ }^{\top M} 1000$ is a medium activity granular activated carbon, specifically manufactured for the treatment of water for human consumption, in both municipal and industrial applications. The manufacturing process develops a porous structure that is effective in the removal of dissolved organic matter, pesticides and chemicals that are found in raw water sources. AquaSorb ${ }^{\text {TM }} 1000$ is suitable for use in the treatment of ground, surface and network supplies. The material is compliant with international standards for carbon media used in this application.
