

RESINTECH MBD-15 SC is a one-to-one equivalent mixture of CG8-H-BL (a hydrogen form strong acid cation resin) and SBG1P-OH (a hydroxide form type 1 porous strong base anion resin). *MBD-15 SC* utilizes a dark colored cation resin and a light colored anion resin and is designed to produce very high water quality and to separate easily for regeneration. *ResinTech MBD-15 SC* is intended for use in all mixed bed deionization applications that require high resistivity and high capacity. *MBD-15 SC* is particularly well suited for portable exchange and other polishing applications. *MBD-15 SC* is supplied ready to use with the cation component in the hydrogen form and the anion component in the hydroxide form. Available in grades.

FEATURES & BENEFITS

OUTSTANDING PERFORMANCE

Tested to 18 megohms resistivity as polisher. Rinses below 50 ppb TOC.

EASE OF SEPARATION

Density and color difference between cation and anion components results in good backwash separation during regeneration

SUPERIOR ORGANIC FOULING RESISTANCE

Highly porous anion component minimizes organic fouling

IDEAL FOR PORTABLE EXCHANGE DI SYSTEMS

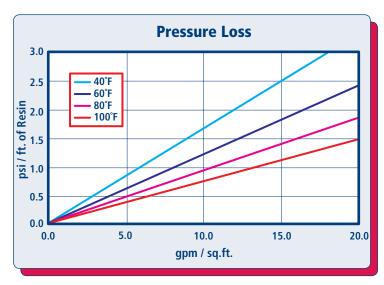

All resin parameters are optimized for use in portable exchange DI systems where the resin is regenerated at a central facility

COMPLIES WITH US FDA REGULATIONS

Conforms to paragraph 21CFR173.25 of the Food Additives Regulations of the US FDA

For applications requiring very high resistivity, 10 bed volumes of rinse should be passed through the resin prior to use.

HYDRAULIC PROPERTIES

PRESSURE LOSS

The graph above shows the expected pressure loss of *ResinTech MBD-15 SC* per foot of bed depth as a function of flow rate at various temperatures.

BACKWASH

The graph above shows the expansion characteristics of *ResinTech MBD-15 SC* as a function of flow rate at various temperatures.

RESINTECH® MBD-15 SC

PHYSICAL PROPERTIES

Polymer Structure Styrene/DVB

Polymer type Gel

Functional Group

Cation component Sulfonic acid
Anion component Trimethylamine
Physical Form Spherical beads
Ionic Form as shipped Hydrogen/Hydroxide

Column Capacity 0.57 meq/mL
Volume ratio Cation/Anion 40/60 percent
Water Retention 60 to 65 percent
Approximate Shipping Weight 43 lbs per cu. ft.

Screen size distribution (U.S. Mesh) 16 to 50

Resin Color

Cation component Brown to black

Anion component Amber

Note: Physical properties can be certified on a per lot basis, available upon request

SUGGESTED OPERATING CONDITIONS

Maximum continuous temperature 140°F
Minimum bed depth 24 inches

Backwash expansion 50 to 100 percent

Maximum pressure loss 25 psi
Operating pH range 2 to 12 SU

Service flow rate

Working 1 to 5 gpm per cu. ft. Polishing 3 to 15 gpm per cu. ft.

Note: These guidelines describe average low risk operating conditions. They are not intended to be absolute minimums or maximums.

For operation outside these guidelines, contact ResinTech Technical Support Group

APPLICATIONS

MBD-15 Throughput Capacity (Gal/cu. ft.)			
TDS (ppm as CaCO ₃) Conductivity (uS/cm)	no CO ₂ or SiO ₂	5 ppm CO ₂ or SiO ₂	10 ppm CO ₂ or SiO ₂
2/5	102,515	29,290	17,086
5/12.5	41,006	20,503	13,669
10/25	20,503	13,669	10,251
20/50	10,251	8,201	6,834
50/125	4,101	3,728	3,417
100/250	2,050	1,953	1,864
200/500	1,025	1,000	976
500/1250	410	406	402
1,000/2500	205	204	203

Mixed Bed throughput capacity is based on the stated inlet conductivity of neutral pH waters and run to a 1 uS/cm endpoint. TDS is based on NaCl (2.5uS/cm/ppm as CaCO₃). Different salts may have different contributions to TDS. Capacity is based on the anion component and is for virgin resin. Following the initial exhaustion and regeneration subsequent cycles will likely be shorter, depending on how skillfully the resins are separated, regenerated, and remixed.

IN PLACE REGENERATION

RESINTECH MBD-15 SC is ideal for in place regenerated mixed beds, especially if they are set up for the 60/40 anion to cation ratio that is optimum for most mixed bed polishers. The cation component, CG8-H-BL, has optimized bead size to separate cleanly from the anion component, SBG1P-OH.

PORTABLE EXCHANGE DEIONIZATION (PEDI)

RESINTECH MBD-15 SC can be used in PEDI applications to remove bulk TDS from raw waters or to remove trace levels of TDS following reverse osmosis or other desalination processes. The mixed resin can be separated into its components, CG8-H-BL and SBG1P-OH, for regeneration, and reused hundreds or thousands of times. The cation component, CG8-H-BL, is dark in color and provides optimized color difference from SBG1P-OH. This color difference is very helpful to verify resin separation during backwash.

EVERY LOT CERTIFIED

Every lot of MBD-15 SC is tested to very capacity under load, ability to rinse above 18 megohms and to rinse down below 50 ppb of TOC. Lot certification is available upon request.
