

# Brio®

**RObust PRO**  
Reverse Osmosis System

*Better water creates  
better coffee!*

## *Why water matters in making coffee?*

Next to the coffee beans themselves, water is the most important ingredient in making coffee.

Different water types can affect the extraction of coffee as well as the taste.

Tap water is considered hard water which can cause scale build-up in equipments.

***The Brio ROust PRO offers the perfect balance of minerals in water for coffee.***

### *Benefits of ROburst PRO*

Water filtration system specifically designed to enhance the taste of coffee.

Loved (or Accepted?) by professional barista and in compliance with SCA in providing best water for coffee.

Not only suitable for making the best coffee and espresso, it also elevates customer experience by providing great tasting water and pure ice.

## *What influences the flavor of coffee?*

Coffee bean roast types: light, medium, dark

Water quality: ph level, hardness, mineral balance

Coffee bean grind levels: extra fine to coarse

Water to coffee bean contact time

Coffee machine type and model

Extraction temperature

## CHEMICAL FRIENDS OF COFFEE

### ***Magnesium***

Extracts 7X better than calcium

Adds notes of fruits to coffee

Prevents scale build-up

### ***Calcium***

Helps magnesium for better extraction

Adds sweetness and density to coffee

Liable to scale build-up

### ***Hydrocarbonate / Bicarbonate***

Acts as a buffer to acidity

Balances the acidity of coffee

Neutralizes the bitterness of unwanted acids

## BEST FILTRATION SYSTEM FOR COFFEE

### *5-Stages of Filtration*

Powerful RO water filtration system

Compact design with pressure pump

Comes with everything for easy install

Replacement filters available

### **RObust PRO**

### *Balancing of Minerals*

Enriches water with magnesium and calcium to enhance the extraction of coffee flavor and aroma

Provides up to **60% of magnesium**, ideal balance for enhancing the taste of coffee

Prevents scale build-up in equipments

### *SCA Standards*

Characteristic	SCA	ROBUST PRO
Hardness, ppm	17.5–85.0	50.0–60.0
Bicarbonates, ppm $\text{HCO}_3^-$	42.7–54.9	42.0–55.0
pH	6.5–7.5	6.7–7.3
TDS, mg/L	75–150	75–85

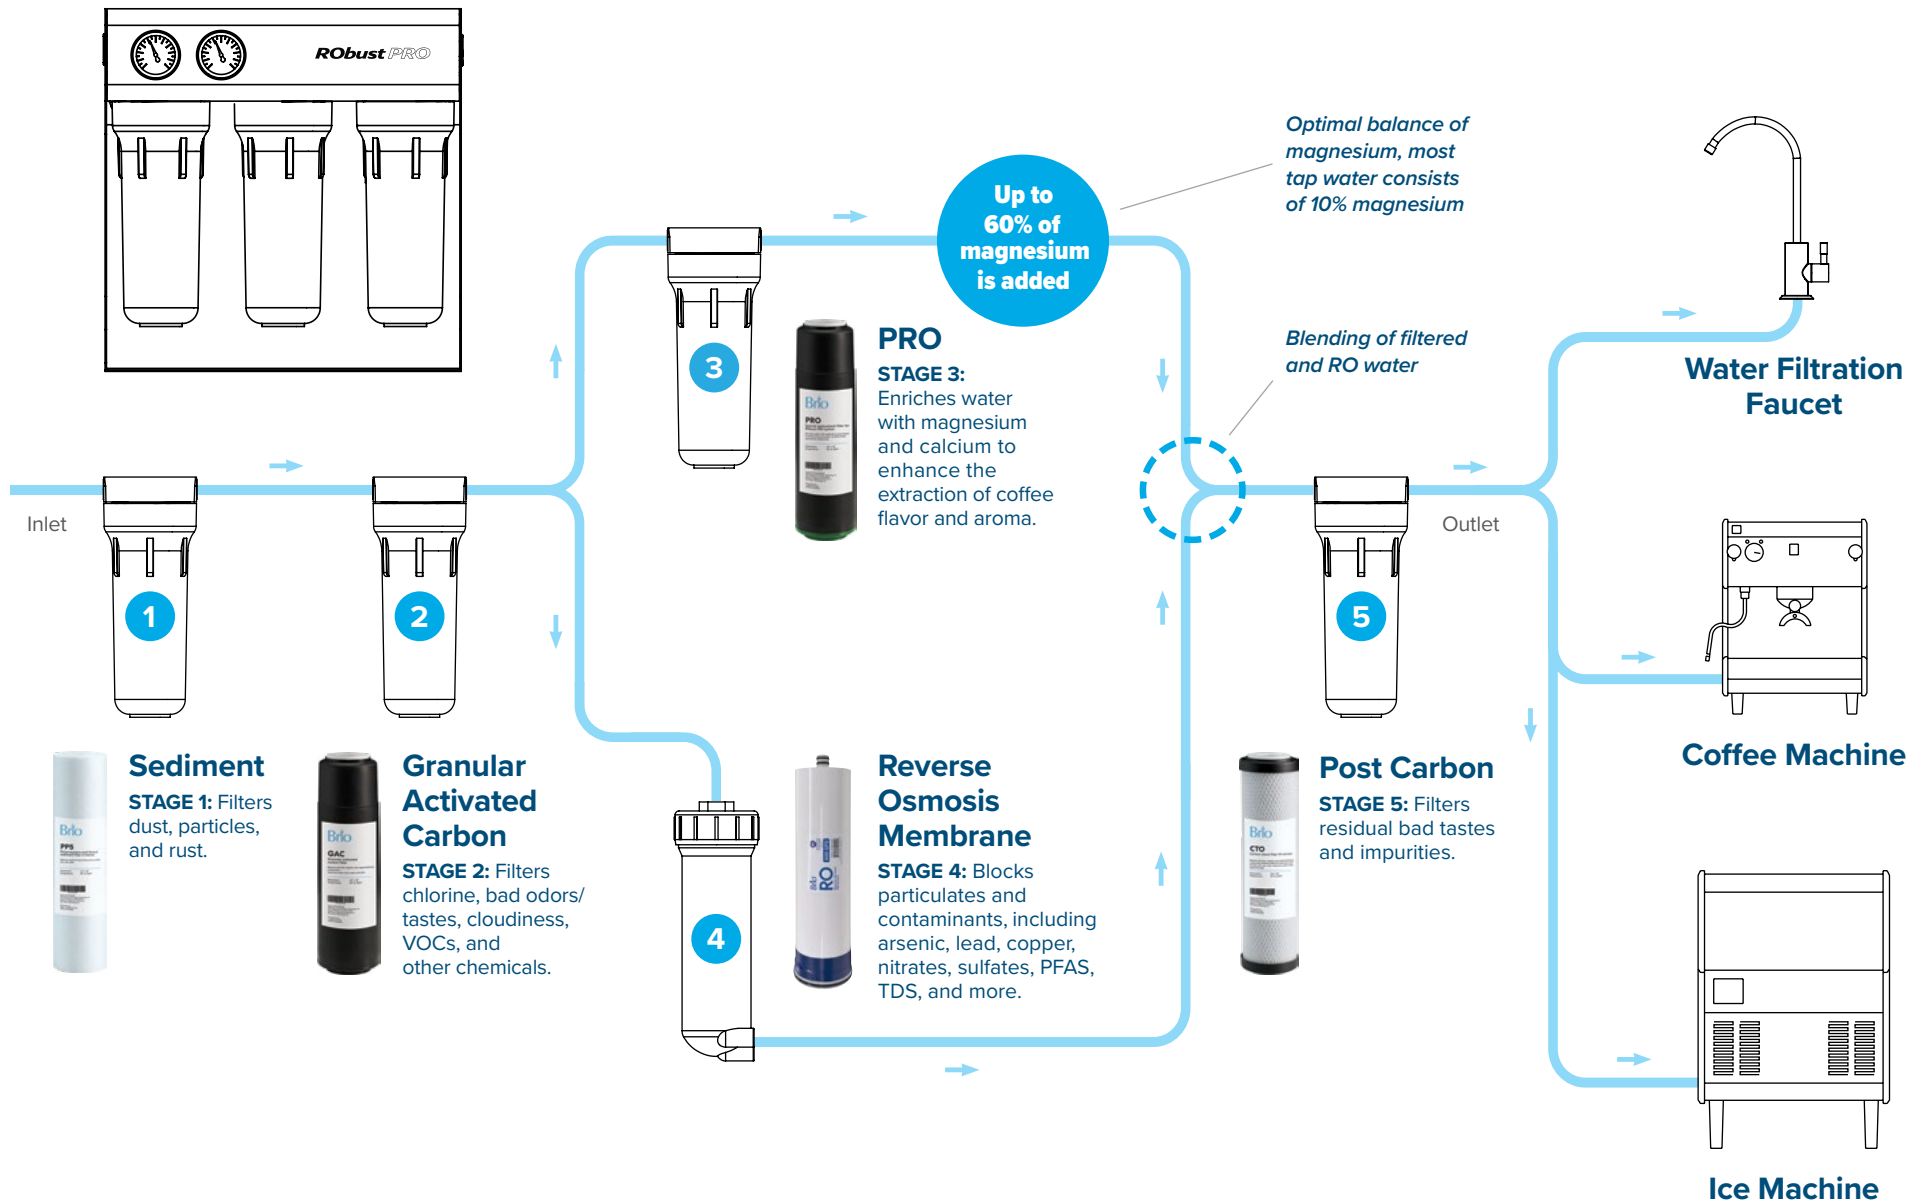

NOTE: Results based on if the inlet water quality requirements are met.

***The perfect brew!***
